SQL

***Display employee name, department, salary, and salary_rank**

***Use DENSE_RANK() with PARTITION BY department**

***Display only employees whose salary rank is less than or equal to 2 include all ties**

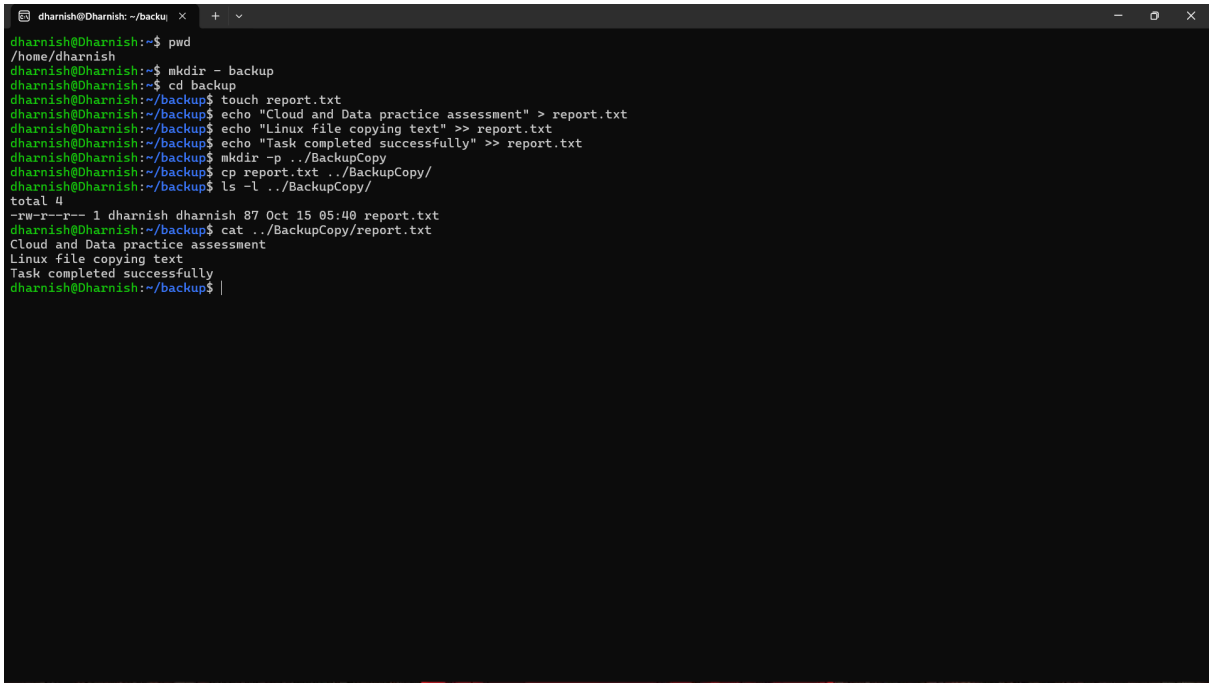

LINUX

Create a directory named Backup and a file named report.txt inside it. Add text to the file, copy it to another directory, and demonstrate that the copied file exists and display its contents.

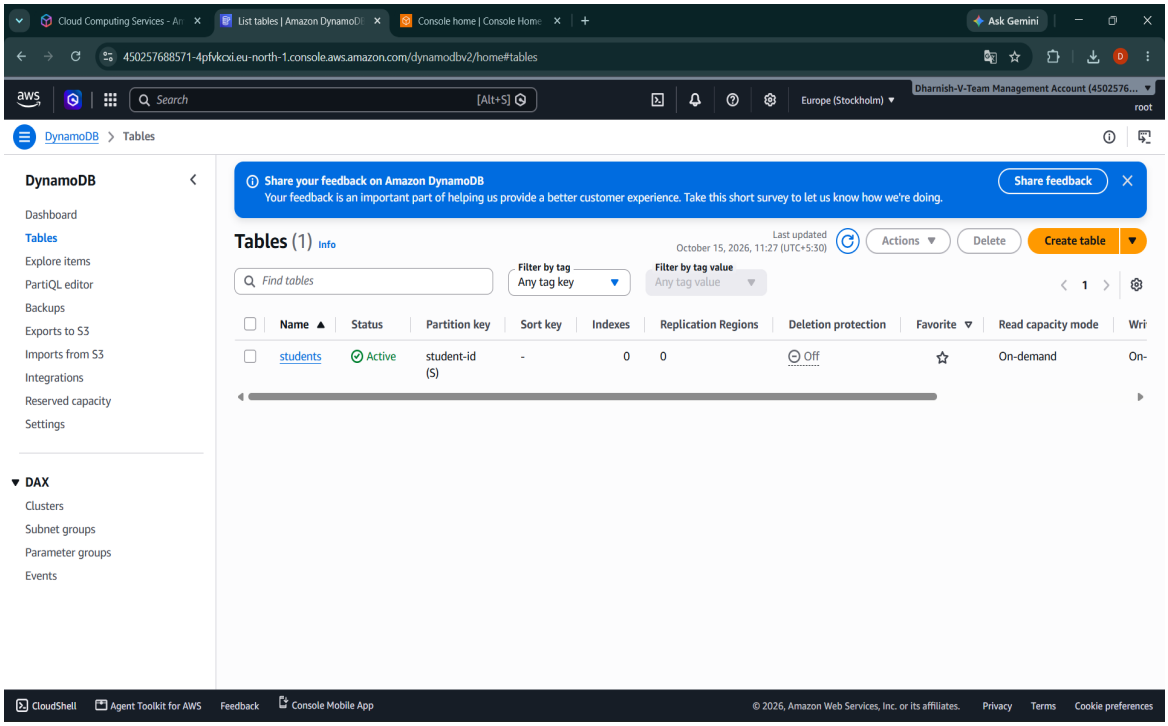

Expected output: The copied file and its contents.

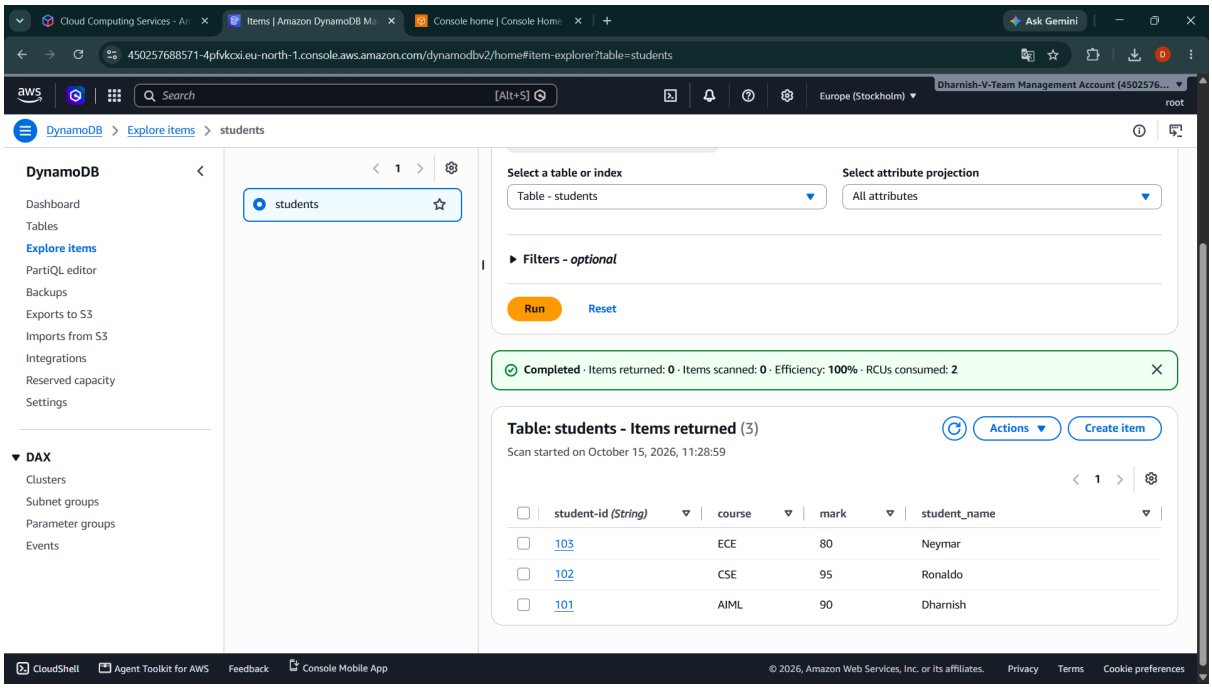

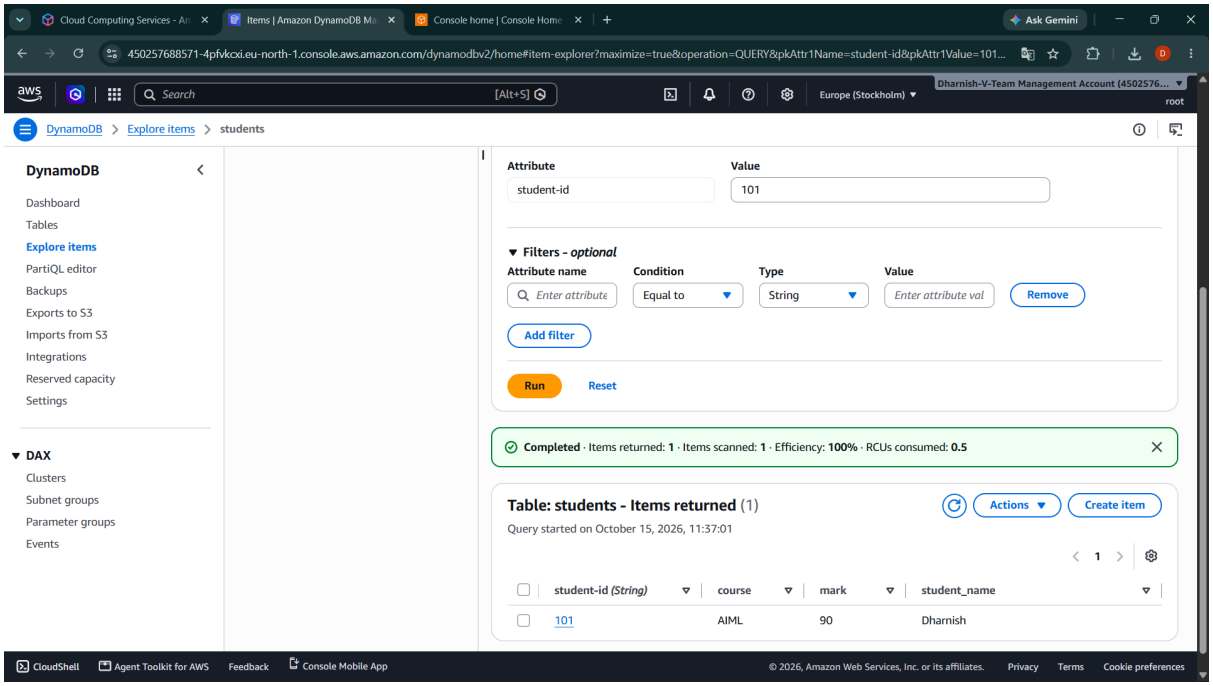

AWS

Create a DynamoDB table with an appropriate partition key, insert an item, retrieve the item using its key, and demonstrate its attributes.

Expected output: The retrieved item with its attributes.

AWS LAMBDA

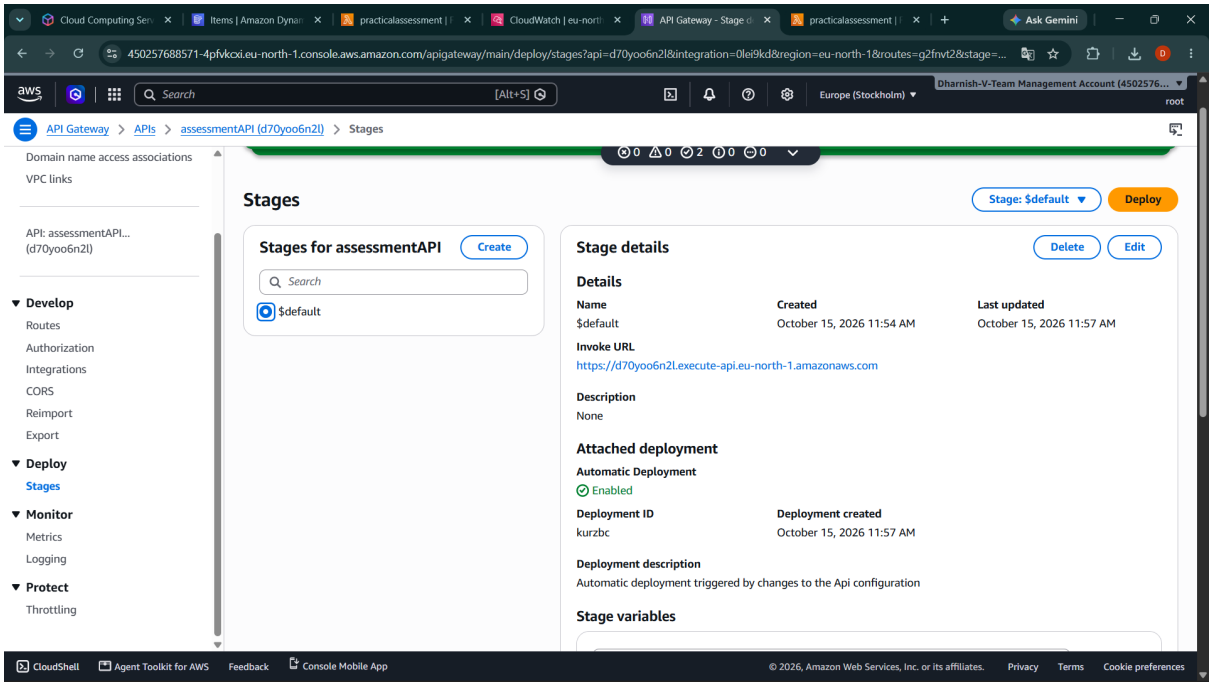

Using an existing API Gateway and Lambda function or an available environment, identify the API endpoint, demonstrate its Lambda integration, invoke the endpoint using an appropriate HTTP method, and display the response.

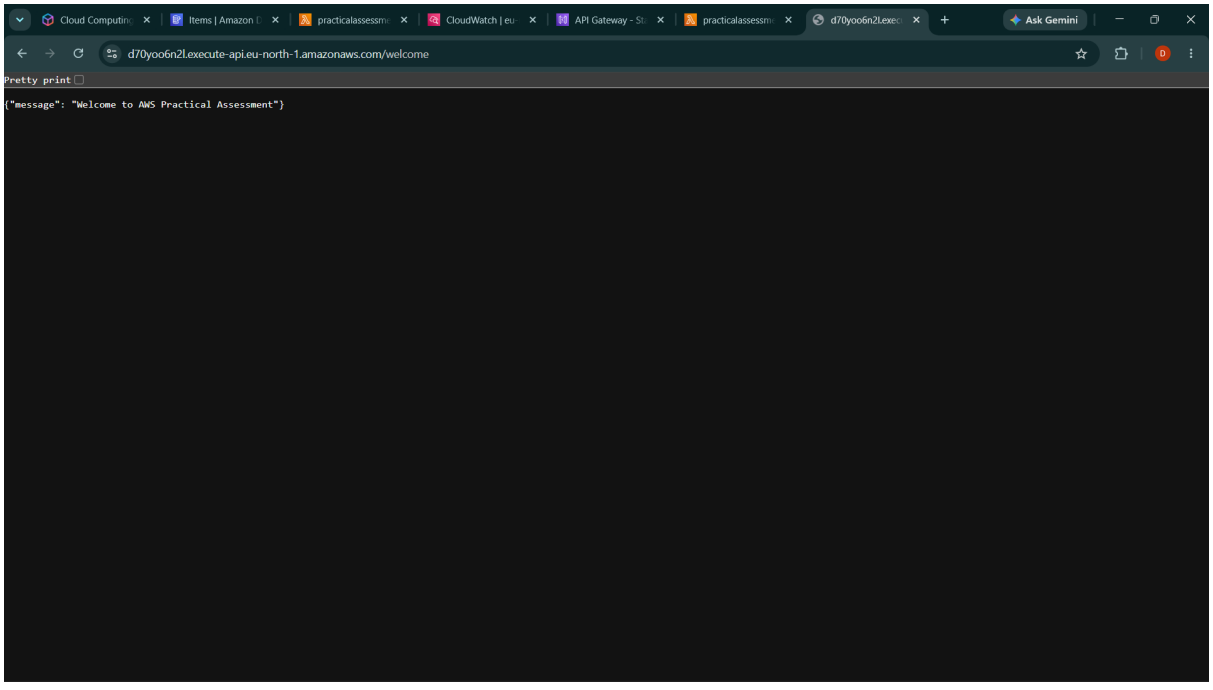

Expected output: A successful API response from the Lambda-backed endpoint.

Successfully updated the function "practicalassessment".
import json
def lambda_handler(event, context):
return {
"statusCode": 200,
"headers": {
"Content-Type": "applicatio
},
"body": json.dumps({
"message": "Welcome to AWS
})
}
Test event
Save
Test
To invoke your function without saving an event, configure the JSON event, then choose Test.
Invocation type
Synchronous
Executes the Lambda function and blocks until receiving the function's response, with a maximum timeout of 15 minutes.
Asynchronous
Enqueues the Lambda function for execution and returns immediately with a request ID.
